

Digital Coast: Geospatial Tools for Coastal Communities

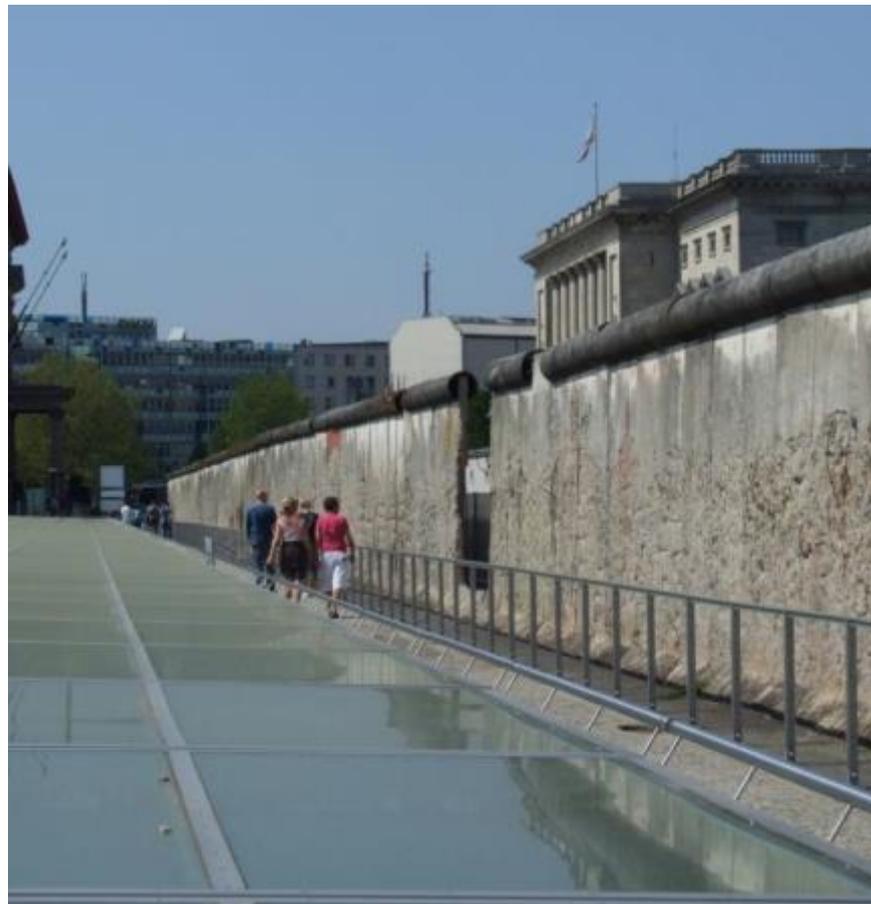

NOAA Hydrographic Services Review Panel
September 17, 2014

Miki Schmidt
Division Chief
Science and Geospatial Services

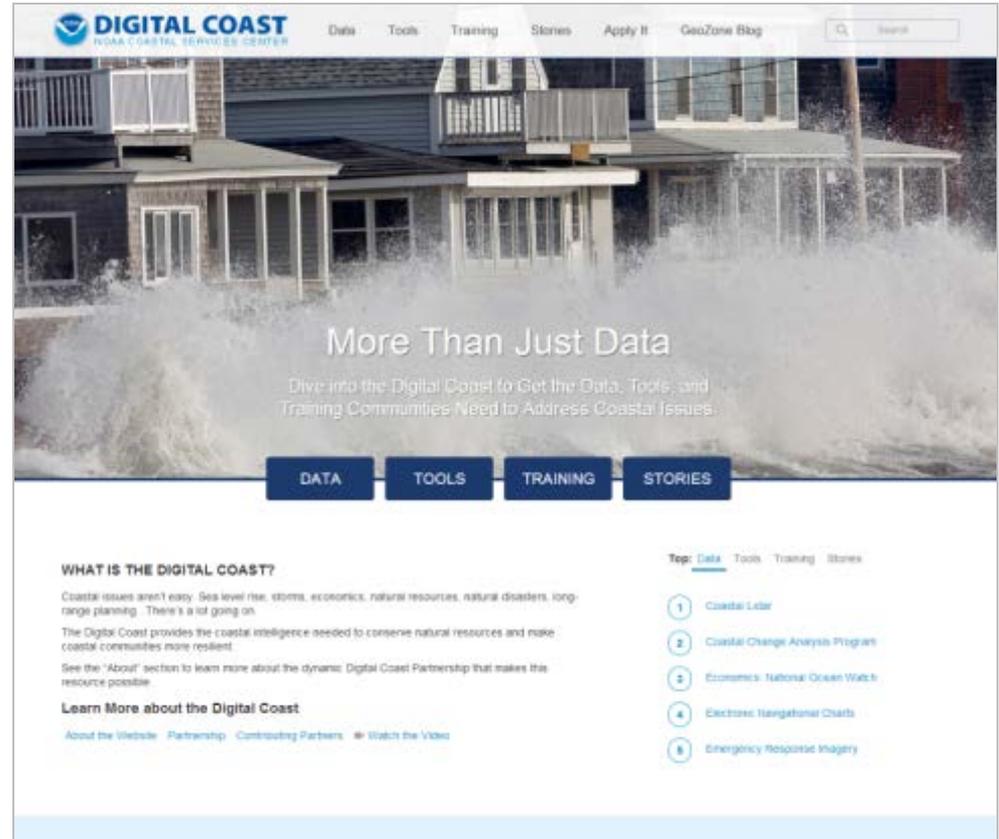

Digital Coast – Addressing Barriers

- Coastal data availability
- Data integration and accessibility
- Improved intergovernmental coordination
- Techie and non-techie tools
- Training
- Outreach and awareness

Digital Coast

- **Approach:** Bring the geospatial and coastal management communities together
- **Outcome:** A **constituent-driven, integrated, enabling platform** supporting coastal resource management **that is used**

Sea Level Rise and Coastal Flooding Impacts Viewer

Contributing Partners: NOAA Coastal Services Center

Overview

In Action

Support

Get It Now

Launch Viewer 

Being able to visualize potential impacts from sea level rise is a powerful teaching and planning tool, and the Sea Level Rise Viewer brings this capability to coastal communities. A slider bar is used to show how various levels of sea level rise will impact coastal communities. Additional coastal counties will be added in the near future. Maps are not currently available for Alaska and Louisiana due to elevation data accuracy, hydraulic complexity, and vertical datum transformation gaps.

Features

- **Displays** potential future sea levels
- **Provides** simulations of sea level rise at local landmarks
- **Communicates** the spatial uncertainty of mapped sea levels
- **Models** potential marsh migration due to sea level rise
- **Overlays** social and economic data onto potential sea level rise
- **Examines** how tidal flooding will become more frequent with sea level rise

Acknowledgments

The NOAA Coastal Services Center would like to acknowledge those organizations that provided direct content for this tool or feedback, ideas, and reviews over the course of the tool's development. Specifically, the Center acknowledges the [following groups](#)

Disclaimer

The data and maps in this tool illustrate the scale of potential flooding or land exposure at a given water level, not the exact location. They do not account for erosion, subsidence, or future construction. Water levels are shown as they would appear during calm conditions (excludes wind driven changes in water levels). The data, maps, and information provided should be used only as a screening-level tool for management decisions. As with all remotely sensed data, all features should be verified with a site visit. The data and maps in this tool are provided "as is," without warranty to their performance, merchantable state, or fitness for any particular purpose. The entire risk associated with the results and performance of these data is assumed by the user. This tool should be used strictly as a planning reference tool and not for navigation, permitting, or other legal purposes.

Coastal County Snapshots

NOAA Coastal Services Center

Overview In Action

OVERVIEW

Tweet 13

Coastal County Snapshots turn complex data into easy-to-understand stories, complete with charts and graphs. Users select a coastal county of interest and the website does the rest, providing information that can help communities become more resilient to coastal hazards.

Local officials can use the snapshots as a planning tool to assess their county's resilience to flooding and understand the benefits provided by natural resources. The handouts generated by the snapshots can be a helpful educational tool when working with governing bodies and citizen groups.

Current topics include

- Flood exposure
- Wetland benefits
- Ocean and Great Lakes jobs

[Tell us how your county uses the snapshots.](#)

[View a recorded webinar](#) to learn more about Coastal County Snapshots.

Launch Now

FEATURES

- Assesses a county's exposure and resilience to flooding
- Analyzes a county's dependence on the ocean or Great Lakes for a healthy economy
- Examines the benefits a county receives from its wetlands
- Compares counties to each other or for regional analysis

Launch Now

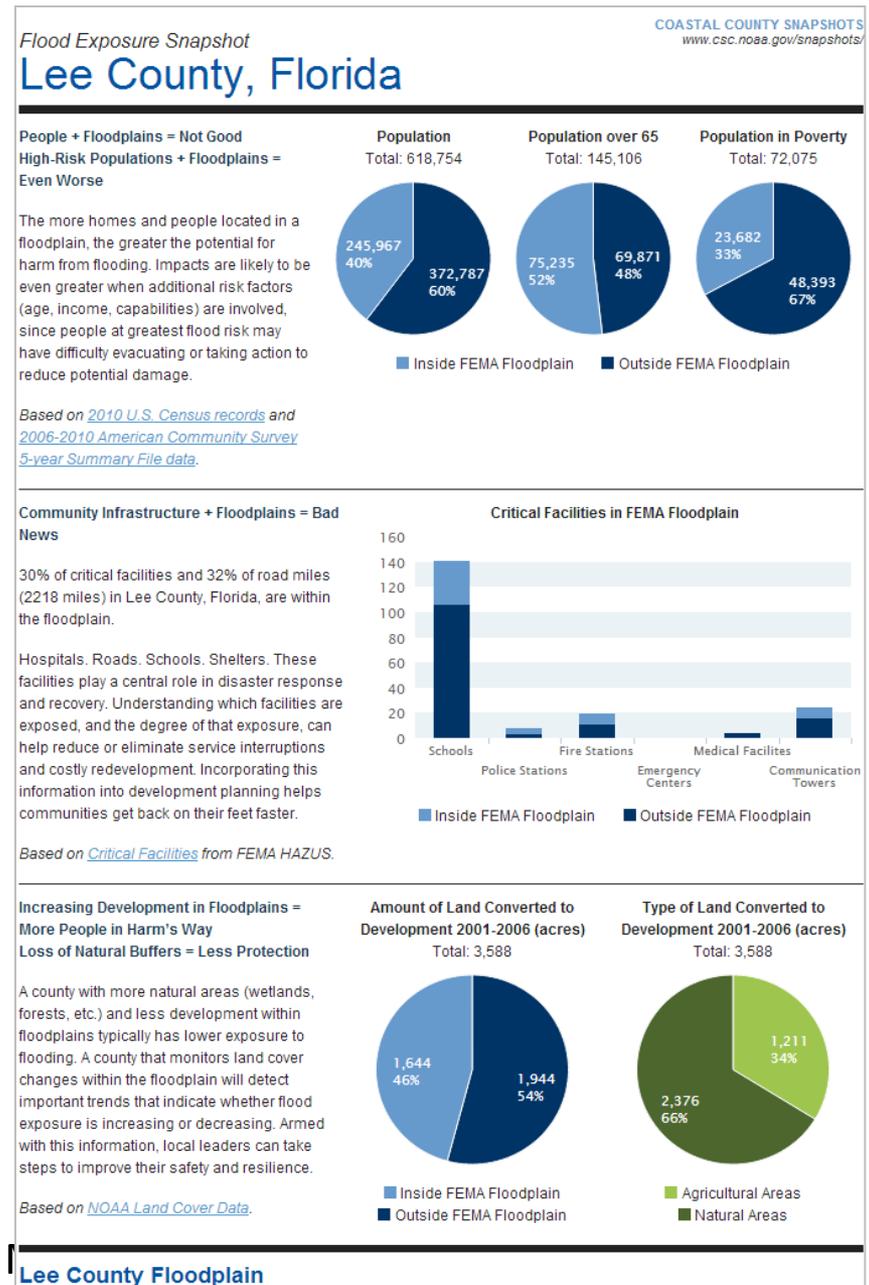

Office

Flood Exposure Snapshot

- Provides information on flood risk related to:
 - Vulnerable populations
 - Critical facilities
 - Land cover change over time
- Based on data obtained from FEMA, U.S. Census, and NOAA

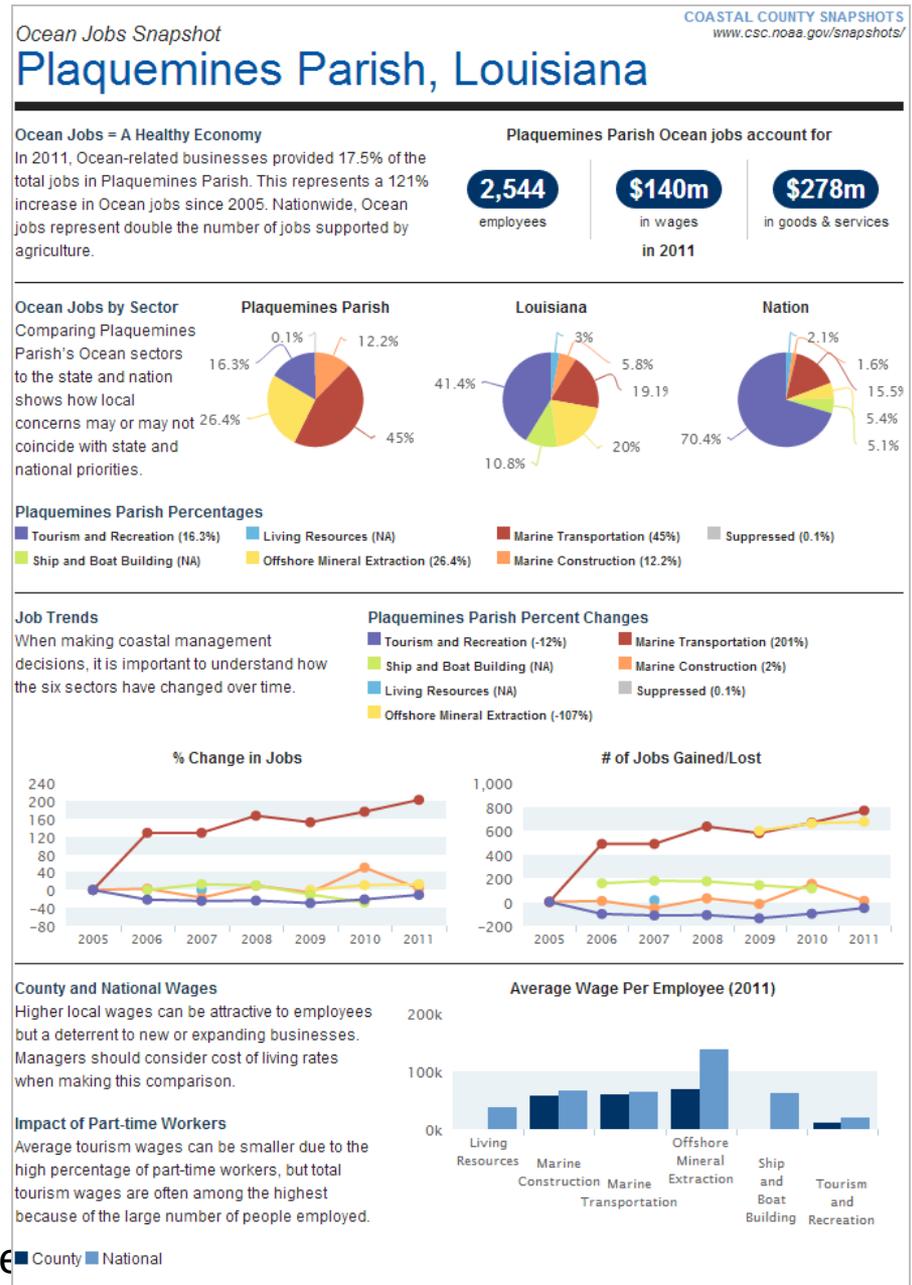

Office of Ocean and Coastal Resource I

Ocean Jobs Snapshot

- Provides quick visuals and statistics related to the ocean economy for the Economics: National Ocean Watch (ENOW) coastal counties
- Provides big picture context that allows you to quickly see how you compare to the state and nation

Port Resilience Planning Tool

Overview

When officials plan for the infrastructure of port communities, a clear focus on resilience will pay off many times over in terms of safety and economic stability. This prototype tool provides checklists, maps, and data for assessing resilience in the areas of marine transportation, port communities, and coastal hazards. It is intended for those involved in infrastructure planning for ports and surrounding communities and those responsible for freight-related infrastructure project development or review.

Features

- Provides checklists of resilience factors to consider
- Shows data on resilience indicators for 26 U.S. port communities
- Uses geospatial data to illustrate resilience factors in Tampa Bay, Florida

Launch Now

Marine Transportation

Resilience Planning Tool

To be resilient, port communities should have the infrastructure and resources needed to sustain safe, secure, and economically viable marine transportation operations.

Resilience assessment and planning resources in this section help officials answer the following questions:

Water-Side Capacity

Does the water side of the marine transportation system infrastructure have adequate capacity to support current and projected freight transportation demands?

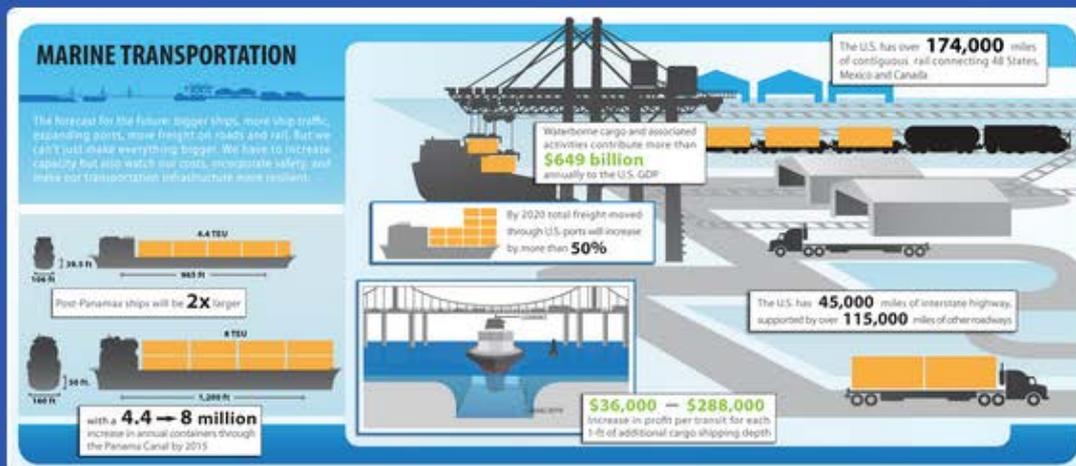

Land-Side Capacity

Does the land side of the marine transportation system infrastructure have adequate capacity to support current and projected freight transportation demands?

Transportation Safety

Does the marine transportation system infrastructure adequately support current and projected safety needs?

[View Sources and Print \(PDF\)](#)

Port Communities

Resilience Planning Tool

To be resilient, port communities should effectively balance economic, environmental, and societal benefits and costs associated with marine transportation operations.

Resilience assessment and planning resources in this section help officials answer the following questions:

Community Livability

Does the port and surrounding community collaboratively evaluate and address marine transportation system impacts on health, safety and quality of life for local residents?

Natural Resources

Does the port and surrounding community collaboratively address marine transportation system impacts on the health, function and sustainability of critical natural resources?

Economic Development

Does the port and surrounding community collaboratively invest in marine-related economic development, workforce training and community education?

[View Sources and Print \(PDF\)](#)

Coastal Hazards

Resilience Planning Tool

To be resilient, port communities should be able to keep marine transportation moving, businesses open, and people working despite impacts from hazardous events.

Resilience assessment and planning resources in this section help officials answer the following questions:

Hazard Risks

Does the port and surrounding community collaboratively evaluate and address marine transportation system impacts on health, safety and quality of life for local residents?

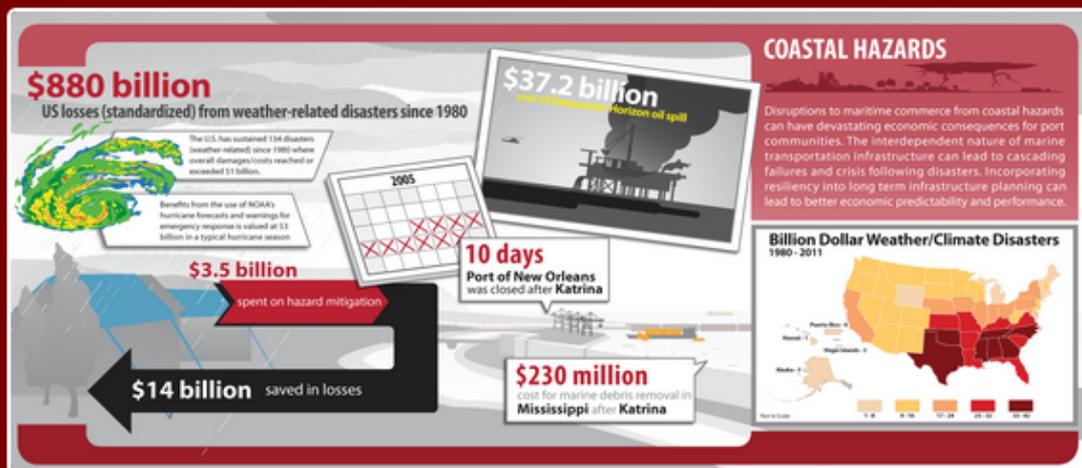

Community Vulnerabilities

Does the port community adequately address key physical, social, and economic vulnerabilities that increase disaster impacts or delay disaster recovery of the marine transportation system?

Disaster Responses

Does the port and surrounding community collaborate effectively on disaster response, recovery, and mitigation to improve marine transportation resilience?

[View Sources and Print \(PDF\)](#)

Local Story

Coastal Flood Risk

Ports and surrounding communities that are aware of their vulnerabilities tend to incur fewer losses from coastal hazards. As with many low-lying coastal areas, the Tampa Bay region is particularly vulnerable to coastal flooding.

The map shows the FEMA flood zone in blue.

[Related Data and References](#)

Community Vulnerabilities Local Maps

Resilience Planning Tool

Checklist

Port Profiles

Local Maps

Local Story

Development Vulnerabilities

Floodplains with more natural landscapes and less urban development typically have a lower exposure to flooding. Local planners can take steps to improve their resilience by monitoring land cover changes within the floodplain, allowing them to detect trends that indicate an increase in flood exposure. In Pinellas, Hillsborough, and Manatee Counties, 941 out of 6,070 acres (16%) of land developed from 2001 to 2006 were in the FEMA floodplain.

The map shows the areas converted to development (red) and the flood zone (blue).
