

Nueces Delta Restoration Study, Nueces River Delta, Texas.

Graduate student Andrea Ryan is working with Dr. Ben Hodges of the University of Texas on the Nueces Delta Restoration Study with the Coastal Bend Bays and Estuaries Program in collaboration with state and local agencies. The physical portion of the project involves numerical modeling of the physical fluxes of water and nutrients through the Delta. In order to accomplish this task, the project staff are collecting data including water levels, wind direction and wind speed from the National Water Level Observation Network to input into the model.

Comment [rla1]: Per Gary Jeffress request – R. Arenson will work on an introductory sentence.
