

Online NOAA Custom Chart Application
May 20, 2021

Here is some additional information that you may find useful.

One attendee asked about coordinate-based searches.

We found that you can indeed enter geographic coordinates into the NOAA Custom Chart search tool, if you use the correct format.

Coordinates need to be in signed (+ / -) decimal degrees, *with the longitude first*.

For example, to find 38.681° N, 74.765° W, Enter -74.765, 38.681.
